

# Specialty Training Programs

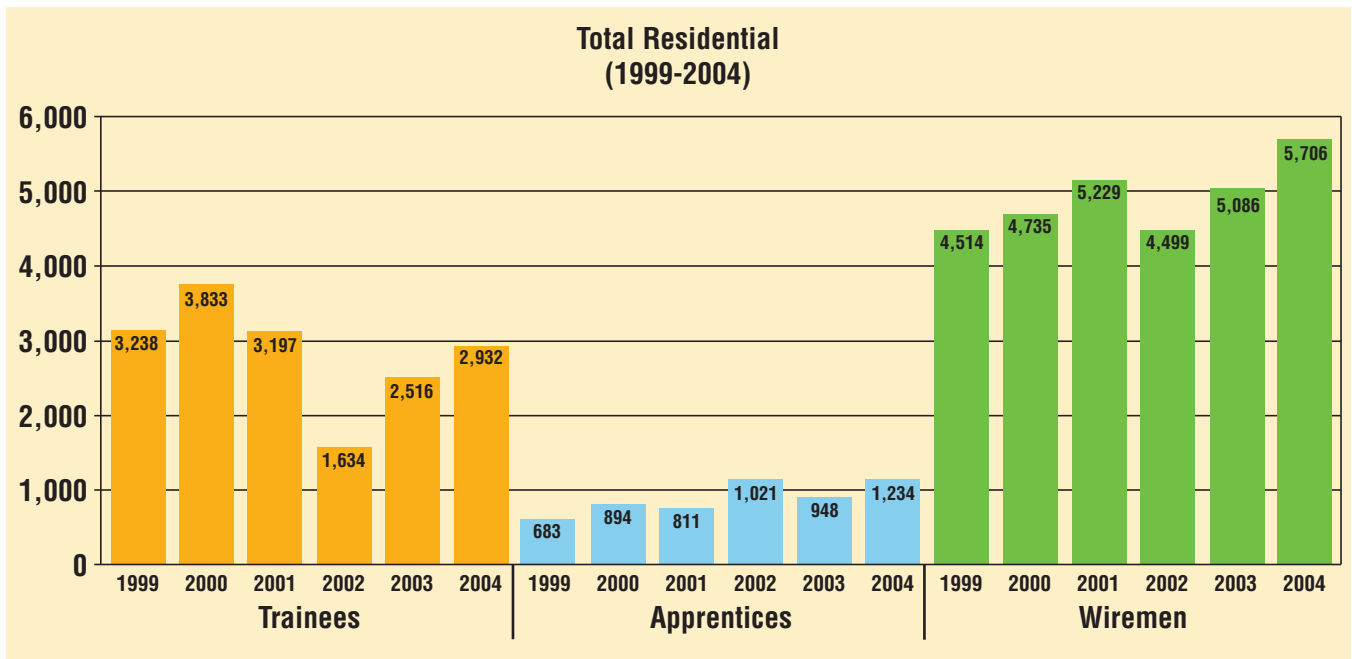

## Post Gains, Too

In addition to the five-year program, which takes raw apprentices and turns them into skilled electrical journeymen, the NECA-IBEW team has three specialty programs:

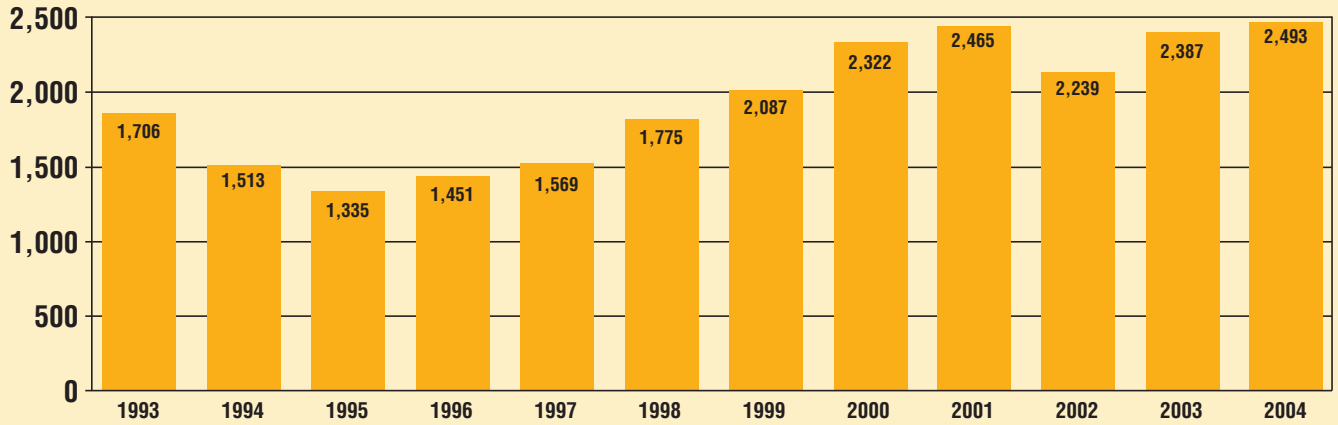

Telecommunications installer/technician—trains apprentice to journey-level skills for telecommunications and integrated building systems work. This is a three-year program.

“Outside” linemen—this program teaches the apprentice to work on power line installations and other high-voltage electrical power work, as well as broadband telecommunications construction.

Residential wiremen—this three-year program prepares apprentices to take on residential electrical construction work.

**Total Active (outside)  
(1992-2004)**

**Installer/Technician Totals  
(1999-2004)**
